- Direct Line Insurance in the UK commissioned a study in driving simulators comparing drivers when they were legally drunk to these same drivers while using hand-held and hands-free mobile phones. Both phone uses showed greater driver

impairment than being drunk. This is the first study to compare alcohol-impaired drivers with their own reaction times, etc., while sober and using mobile phones.	Turk-Browne N et al (2006) Linking implicit and explicit memory: common encoding factors and shared representations <i>Neuron</i> 49: 917 - 927	Experts vs. novices
Talking on a mobile phone whilst driving is MORE dangerous than being drunk behind the wheel*	We pay strongest attention to the emotional components of memory	How Experts Differ From Novices in <i>How People Learn</i> (Bransford et al Eds) National Academy Press (Washington, DC) pp. 31 - 50
An ECS is the best processed information of any type (better encoded, better recalled)	Dolcos, F et al (2004) Interaction between the amygdala and the medial temporal lobe memory system predicts better memory for emotional events <i>Neuron</i> 42: 855 - 863
