Ticknor & Fields (NY)

The following data from Gottman and references therein.

Gottman, J. (1997)
Raising an Emotionally Intelligent Child: the Heart of Parenting
Simon & Schuster (NY)

- When a couple constantly fights, their conflict gets in the way of their child's ability to form friendships.
Gottman, p. 25.

- Parents displaying constant hostility create kids with more antisocial behavior and aggression towards their playmates. There is more stress hormone in urine. They have more difficulty regulating their emotions, focusing attention and soothing themselves when they become upset.
Gottman, p. 139

- Children whose parents were distressed in their marriages played less collaboratively and had more negative interactions with their playmates than children whose parents were happily married.
Gottman, p. 140
